Dear Applicant:

Thank you for your interest in the Texas Tech University Health Sciences Center Dermatology residency training program. We typically receive around 350 applications annually, of which approximately 30 are selected for interviews. All of the applicants who have been accepted in the past 10 years have come from schools accredited by the LCME, and most were in the top quartile of their medical school class. We will consider applications from candidates who have already had advanced training in specialties, such as internal medicine or pediatrics, unlike some programs that do not consider such applicants due to policies that cut funding for second residencies. TTUHSC residents are paid; therefore, we do not accept residents who volunteer to work in unsalaried positions. No research positions are available for candidates hoping to begin a dermatology residency at a later date. All applicants must pass Part I of the USMLE examination within three (3) attempts prior to acceptance. We encourage, but do not require, applicants to take USMLE Step II before the interview process. However, PGY I residents must present written proof to the Program Director and the GME Office of 1) having taken USMLE Step III, and 2) having taken and passed USMLE Step II CK and CS, or their equivalents, within the number of attempts permitted for Texas licensure.

Prior to entering the TTUHSC three-year Dermatology residency program, trainees must complete at least a one-year PGY-I internship in one of the following disciplines: pediatrics, internal medicine, family medicine, surgery, transitional, or some other broad-based discipline acceptable to the American Board of Dermatology. A total of ten residents comprise the TTUHSC Dermatology residency program, and all positions which are to begin July 2017 are already filled. The deadline to
apply for one of the three PGY-I Dermatology positions to begin July 2018 is October 15, 2016, and the national match will occur March 2017. Applicants may apply for the PGY-II Dermatology slot alone, or may also apply through the surgery department for one of their departments two PGY-I positions here at Texas Tech to begin in July 2017. Although the TTUHSC Department of Surgery has two one-year PGY-I positions set to begin July 2017, the Surgery internship and Dermatology programs are not linked. Therefore, the PGY-I internship may be completed at TTUHSC or some other program. Interviews will be conducted for all programs from November 2016 through January 2017. TTUHSC adheres to the rules of the AAMC matching program, and all applications must be submitted electronically through the national ERAS program (www.aamc.org/eras).

While the focus of the TTUHSC Dermatology residency program lies in training competent clinical dermatologists, we also encourage academic development through participation in clinical studies, clinical research projects, and laboratory research. We are proud of the fact that the majority of residents publish studies or case reports, and present their work at state and national meetings. In the past, several residents have gone on to surgery or dermatopathology fellowships. Although most ultimately pursue private practice, six residents have pursued academic careers in recent years.

In addition to staffing the university clinic with approximately 15,000 outpatient visits per year, residents are also involved, in Telemedicine, the VA Clinic, and a city STD clinic. Major strengths of the program include dermatologic surgery and dermatopathology. Since there are no fellows, each resident performs far more Mohs cases than the average number for other dermatology programs. Also, residents may spend time in the private offices of local dermatologists. An optional one-week elective outside of Lubbock is available in the third year. Weekly conferences include: General Dermatology (based on Dermatology by Bologna), Grand Rounds, Dermpath (based on Barnhill’s Textbook), Clinicopathologic Conference (photos providing clinical for pathology based on Barnhill’s Textbook), Journal Club (JAAD, Archives, General literature), and a Potpourri conference. Residents enjoy a liberal policy regarding attendance at state and national meetings, with most expenses paid by the department.

Located on the 1839-acre campus of Texas Tech University, the Health Sciences Center consists of the Schools of Medicine, Nursing, Allied Health, Pharmacy, and the Graduate School of Biomedical Sciences. The TTUHSC School of Medicine has an entering class of 180. The various area medical clinics serve as a major referral center for a vast region between Dallas and Albuquerque. TTUHSC-
Lubbock School of Medicine is the only medical school that offers Dermatology in the western half of Texas. Lubbock has a population of almost 235,000, with a student population over 35,000 and the usual amenities of a university town. The climate, pleasant year round, is moderately dry due to the city’s 3200-foot elevation on the plains of Texas. On average, there are 260 days of sunshine per year.

We look forward to receiving your application. For more information on TTUHSC residents, faculty, publications, and presentations, see the Internet site for Texas Tech University Health Sciences Center at http://www.ttuhsc.edu or the Department of Dermatology webpage at http://www.ttuhsc.edu/SOM/Dermatology/.

Cordially,

Cloyce L. Stetson, M.D.
Professor and Chair
